SUMMARY

Senior software engineer with 10+ years of production experience across cybersecurity products, distributed systems, cloud services, microservices, and cross-platform mobile/web development. Strong track record of technical leadership, architectural ownership, and shipping reliable software in complex environments. Experienced with practical AI and machine learning in real-world products.

EXPERIENCE

OPSWAT - Senior Software Engineer

Feb 2019 - Present

- Lead architecture and development across major product initiatives in cybersecurity and cloud services.
- Own end-to-end delivery across backend services, platform engineering, and cross-functional execution.
- Mentor engineers, improve development workflows, and raise engineering standards through code reviews and best practices.
- Drive scalability and reliability improvements for production systems and customer-facing integrations.

OPSWAT - Software Engineer

Jul 2014 - Feb 2019

- Contributed to flagship cybersecurity products from early stages through large-scale customer deployments.
- Built and maintained core C++ systems across Linux and Windows; improved performance via testing and optimization.
- Collaborated with product and engineering stakeholders to deliver secure, maintainable features on schedule.

Freelancer - Software Engineer

2010 - Jul 2014

- Delivered custom Android and web software solutions end-to-end (requirements, implementation, release, maintenance).
- Built an Android companion app for a baby breathing monitor and multiple web projects for small businesses.

MattaKis Consulting - Internship

2012

- Built an Android expense-tracking application.
- Implemented live video streaming for Android 2.3 using ffmpeg and the native Android SDK.

SELECTED ENGINEERING WORK (OPSWAT)

MetaDefender Core (2014)

- Built distributed file analysis by integrating third-party anti-malware SDKs.
- Designed scalable deployments with load balancing and configurable processing nodes.
- Implemented customizable analysis workflows and verdict propagation; became lead developer and technical decision maker.

C++ | CMake | Qt | Protobuf | REST | Docker | nginx | SQLite | Google Test | TeamCity

MetaDefender as a Service (2020)

- Built provisioning and microservice layers exposing analysis technologies to cloud customers.
- Integrated engines as containerized Node.js microservices and supporting services for messaging/config/logging.
- Packaged deployments with Helm; managed AWS infrastructure with Terraform; improved dev loops with Skaffold.

AWS | Kubernetes | Helm | Terraform | Docker | Node.js | TypeScript | gRPC | Kafka | RabbitMQ | Fluentd

MetaDefender Malware Analyzer (2021)

- Designed a customizable malware-analysis workflow engine and customer integration surface.
- Published and maintained a full OpenAPI spec; implemented RBAC with Casbin and contributed improvements upstream.
- Led technical due diligence and integration of an acquired sandbox solution; modernized deployment to Kubernetes.

Modern C++ | Conan | Casbin | Node.js | TypeScript | OpenAPI | MongoDB | Docker | Kubernetes

Managed File Transfer (2023)

- Served as lead developer and architect on a cross-platform file transfer product.
- Built an automation framework for scheduled transfers and delivered critical security enhancements.

.NET | Entity Framework | MSSQL | nginx | TeamCity

PROJECTS

Momminess - Pregnancy & Baby

Cross-platform web, Android, and iOS app supporting family planning, pregnancy tracking, and baby development tracking.

- Built the product with Flutter and a Firebase-backed platform (Firestore, Auth, App Check, Cloud Messaging, Hosting).
- Developed backend services in Node.js/TypeScript using the Firebase Admin SDK.
- Implemented business analytics in Google Cloud with BigQuery and Metabase reporting.

Flutter | Dart | Firebase | Firestore | Node.js | TypeScript | Web | Android | iOS

artinca - AI Real Estate Price Estimator

- Built an AI-powered real estate price estimator combining machine learning, live advertising data, trends, and statistics.
- Supported multiple independently trained models and regular model updates.

Flutter | Dart | Python | Machine Learning | FlatBuffers | Android

EDUCATION

MSc University of Pannonia - Computer Science Engineering | 2013 - 2015

BSc University of Pannonia - Computer Science Engineering | 2009 - 2013

- Won first place in a 24-hour programming contest.
- Earned second place in another 24-hour programming contest.
- Placed second in Continental's programming contest.

RECOGNITION

OPSWAT President's Club (2021) - company-wide recognition for technical impact, ownership, and contribution.

SKILLS

Languages: C++, C#, Dart, TypeScript/JavaScript, Python, Java

Backend: Microservices, gRPC, REST, Protobuf, OpenAPI, Express, Node.js, .NET

Cloud/DevOps: AWS, Docker, Kubernetes, Helm, Terraform, Kafka, RabbitMQ, Fluentd

Data: MongoDB, MSSQL, SQLite, Firestore

Mobile/Web: Flutter, Android, iOS, Web

Testing/Tooling: Google Test, Catch2, Conan, CMake, Git, TeamCity, Jenkins

LANGUAGES

Hungarian (native)

English (professional)
